MEMORANDUM FOR THE RECORD

SUBJECT: FY-80 Annual Energy Management Report - Automotive Fuel Consumption Date

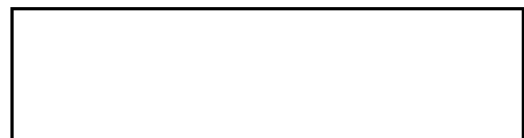

1. We have opted this year to continue reporting to the Department of Energy (DOE) only the fuel consumed by the Logistics Services Division (LSD) Motor Pool vehicles. This decision is consistent with past policy and practices which excluded the reporting of fuel usage by the Freight Traffic Branch (FTB) vehicles. The rationale given for their exclusion is that they are considered "operational" and thus should be exempt from formal external reporting procedures. Nonetheless, comprehensive mileage and fuel consumption records on FTB vehicles are being maintained for internal management and monitoring purposes and, if necessary, can be readily incorporated into future Agency fuel consumption reports.

2. The present method of reporting Agency automotive fuel usage should be reviewed again next year, possibly towards considering incorporating FTB as additional quantitative factors in the total evaluation, measurement and reporting process. Changes may be prompted by a concern to achieve a broader data base against which future Presidential fuel reduction goals can be measured. Our reporting system should remain responsive to current as well as projected demands, including Presidential and Federal fuel restraint mandates, and have the uniformity and flexibility compatible with those demands.
